

A Socio-technical Model for Safe and Effective HIT Implementation & Use

DEAN F. SITTIG, PHD

PROFESSOR, BIOMEDICAL INFORMATICS

UNIVERSITY OF TEXAS HEALTH SCIENCE CENTER AT HOUSTON, TX

An EHR is not an ATM

The screenshot displays a complex medical software interface. At the top, it shows patient information for 'IMAGPatient, One' with ID 080024. Below this, there are sections for 'Lab Results' and 'Laboratory Results'. A table of lab results is visible, with columns for Date/Time, Specimen, HCT, HGB, MCV, PLT, and WBC. A line graph below the table plots Hct (Blood) over time, with a legend indicating 'Ret Low #1' and 'Ret High #1'. The interface is cluttered with various buttons, menus, and data fields, representing a highly detailed and functional system.

≠

The screenshot shows a blue ATM screen titled 'SELECT A TRANSACTION'. It features several large buttons for transaction amounts: \$20, \$50, \$100, \$200, and \$1000. There are also buttons for 'MY ATM', 'FUND TRANSFER', and 'MORE SERVICES'. At the bottom, a green button displays 'BALANCE \$100,000.21' and a red 'CANCEL' button is on the right. The interface is clean and user-friendly, designed for quick transactions.

SHARP-c Clinical Summarization

- Started with a grand plan

John Q. Smith – 375 Plantation Rd. Luling, TX W: 713-985-4215
67yr white male 5'-9" **195 lbs** (↓4 lbs in 12 mo.) **BMI-28.8**

SHARP-c Clinical Summarization

- Started with a grand plan
- Quickly realized that there were many obstacles in our path...
 - Data availability and interpretability issues
 - Gaps in computer-readable knowledge bases
 - Limitations of current EHR interfaces
 - No clear agreement on what summarization even meant!
- Didn't even have the tools – theories or frameworks – to address these sorts of complex, socio-technical problems

Modern healthcare system is a complex adaptive system

- Non-linear and dynamic: does not reach a steady state
- Composed of independent agents whose behavior based on physical, psychological or social rules
- Independent agents are not the same

Modern healthcare system is a complex adaptive system

- Non-linear and dynamic: does not reach a steady state
- Composed of independent agents whose behavior based on physical, psychological or social rules
- Independent agents are not the same
- Agents are intelligent
- Adaption and change leads to self-organizing behaviors
- Result in systems which are unpredictable and uncontrollable

HIT can improve safety and effectiveness of healthcare

- Many isolated examples of significant improvements
- Widespread improvement has been harder to document
- Certainly not guaranteed!

Clinical Summarization

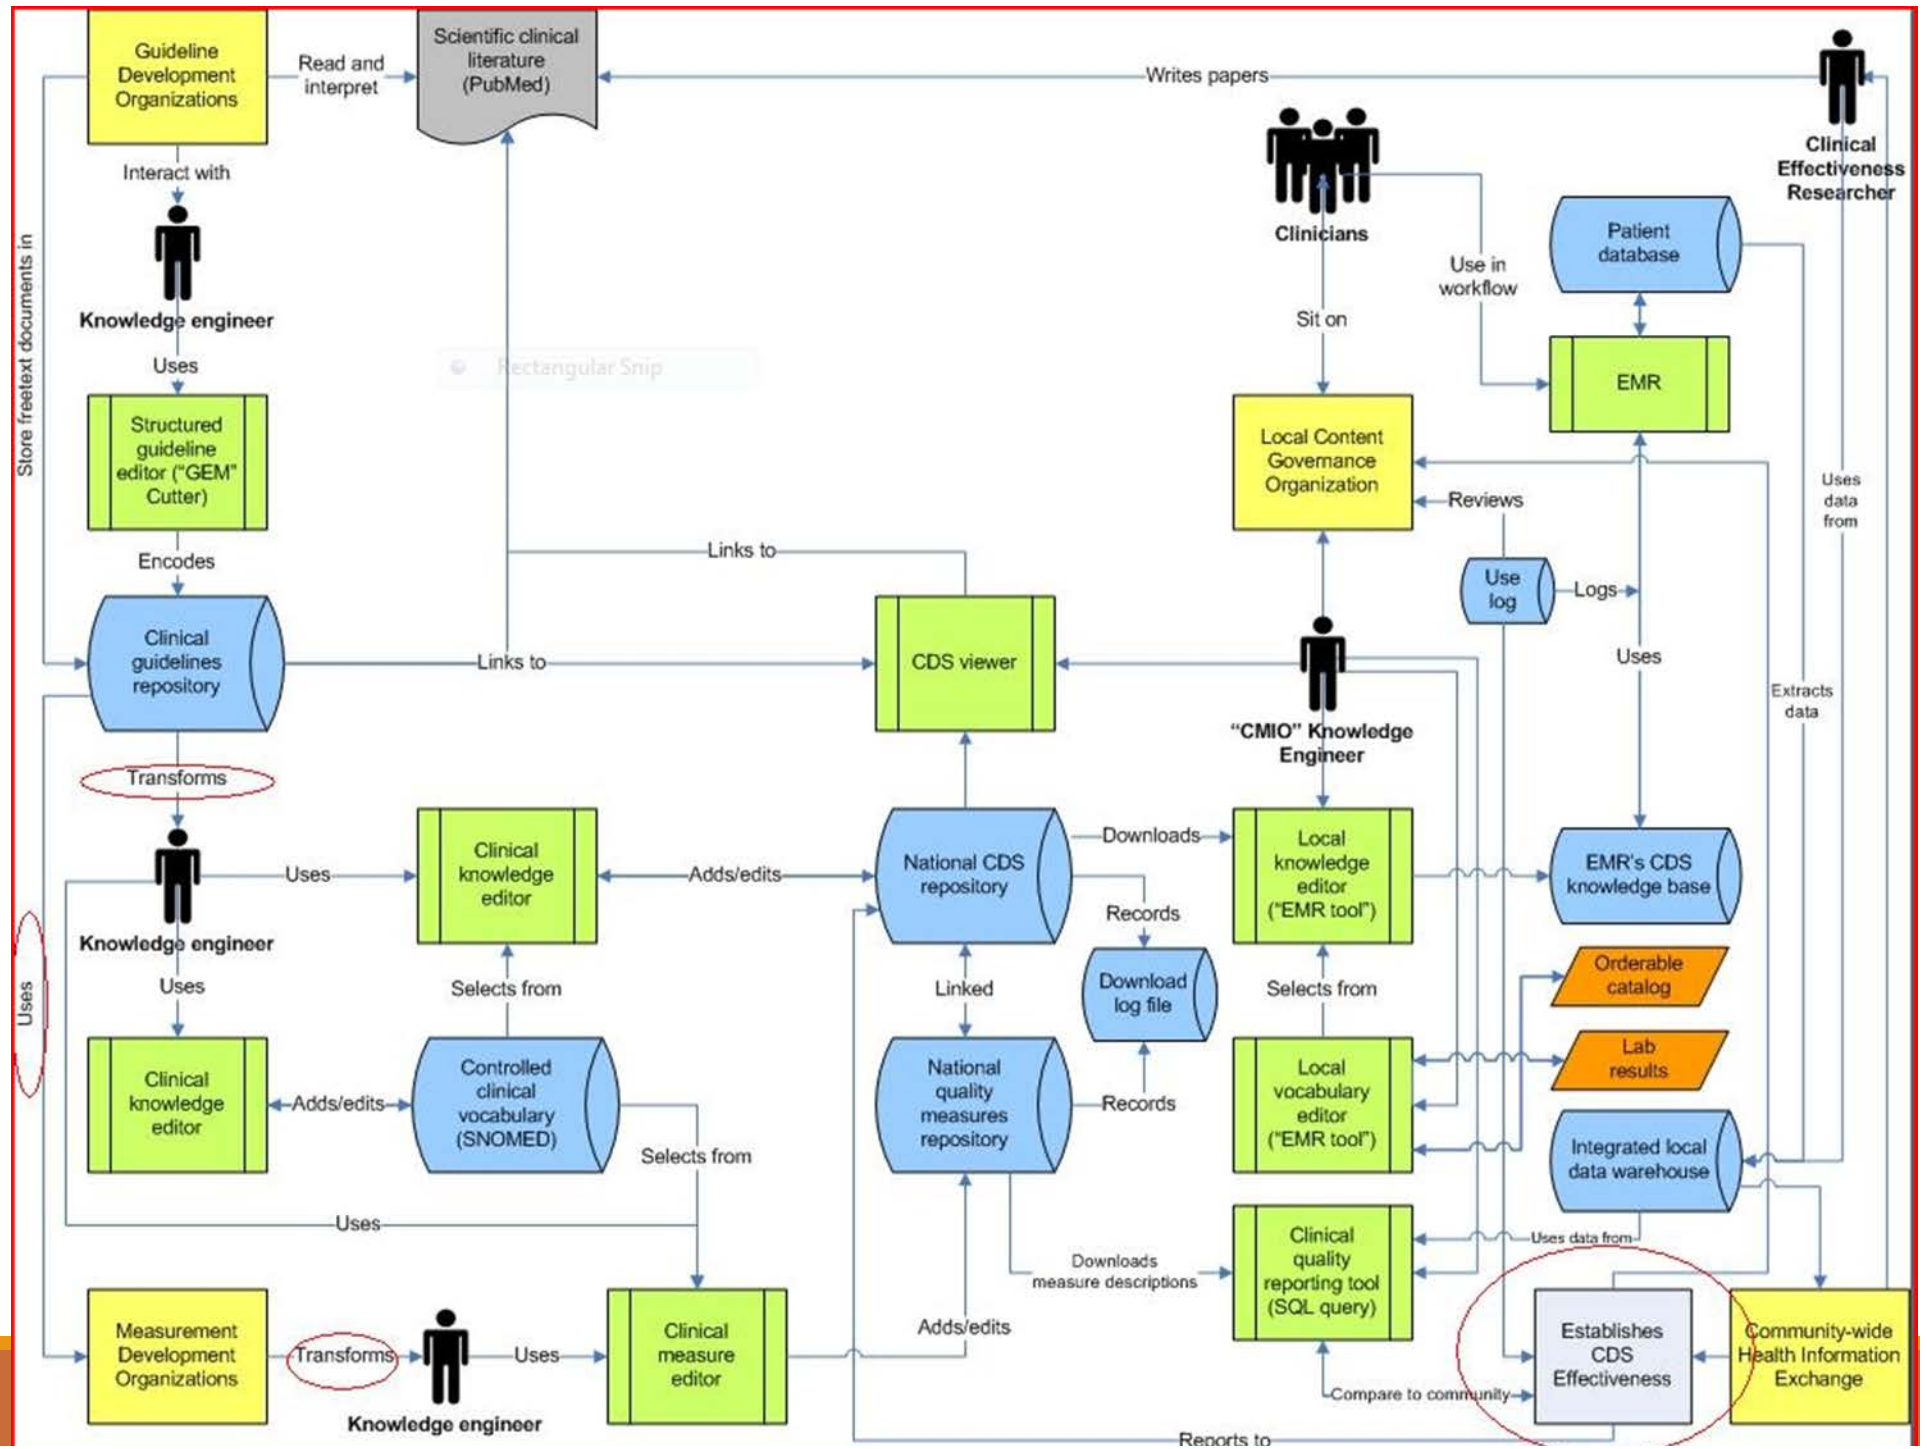

- A key unaddressed Grand Challenge in clinical informatics
- Requires multiple steps, each with major socio-technical obstacles:
 - **Aggregate** – data interchange standards / HIPAA / organizational resistance

HL-7 Reference Information Model

Clinical Summarization

- A key unaddressed Grand Challenge in clinical informatics
- Requires multiple steps, each with major socio-technical obstacles:
 - **Aggregate** – data interchange standards / HIPAA / organizational resistance
 - **Organize** – problem – medication knowledge bases / user interfaces
 - **Reduce / Transform** – clinical knowledge of key concepts
 - **Interpret** – clinical knowledge / FDA regulations?
 - **Synthesize** – knowledge re: combining data / FDA regulations? / clinician resistance

Clinical Summarization

- A key unaddressed Grand Challenge in clinical informatics
- Requires multiple steps, each with major socio-technical obstacles:
 - **Aggregate** – data interchange standards / HIPAA / organizational resistance
 - **Organize** – problem – medication knowledge bases / user interfaces
 - **Reduce / Transform** – clinical knowledge of key concepts
 - **Interpret** – clinical knowledge / FDA regulations?
 - **Synthesize** – knowledge re: combining data / FDA regulations? / clinician resistance
- Failure to address this challenge is NOT an option
- Require long-term commitment using a socio-technical approach

The SAFER Guides for Safe and Effective EHR Implementation and Use

DEAN F. SITTIG, PHD

UTHealth™

The University of Texas
Health Science Center at Houston

School of Biomedical
Informatics

Evolution of safety (and risks) - Phases

Safe IT:

- events unique/specific to EHRs; more likely early in implementation

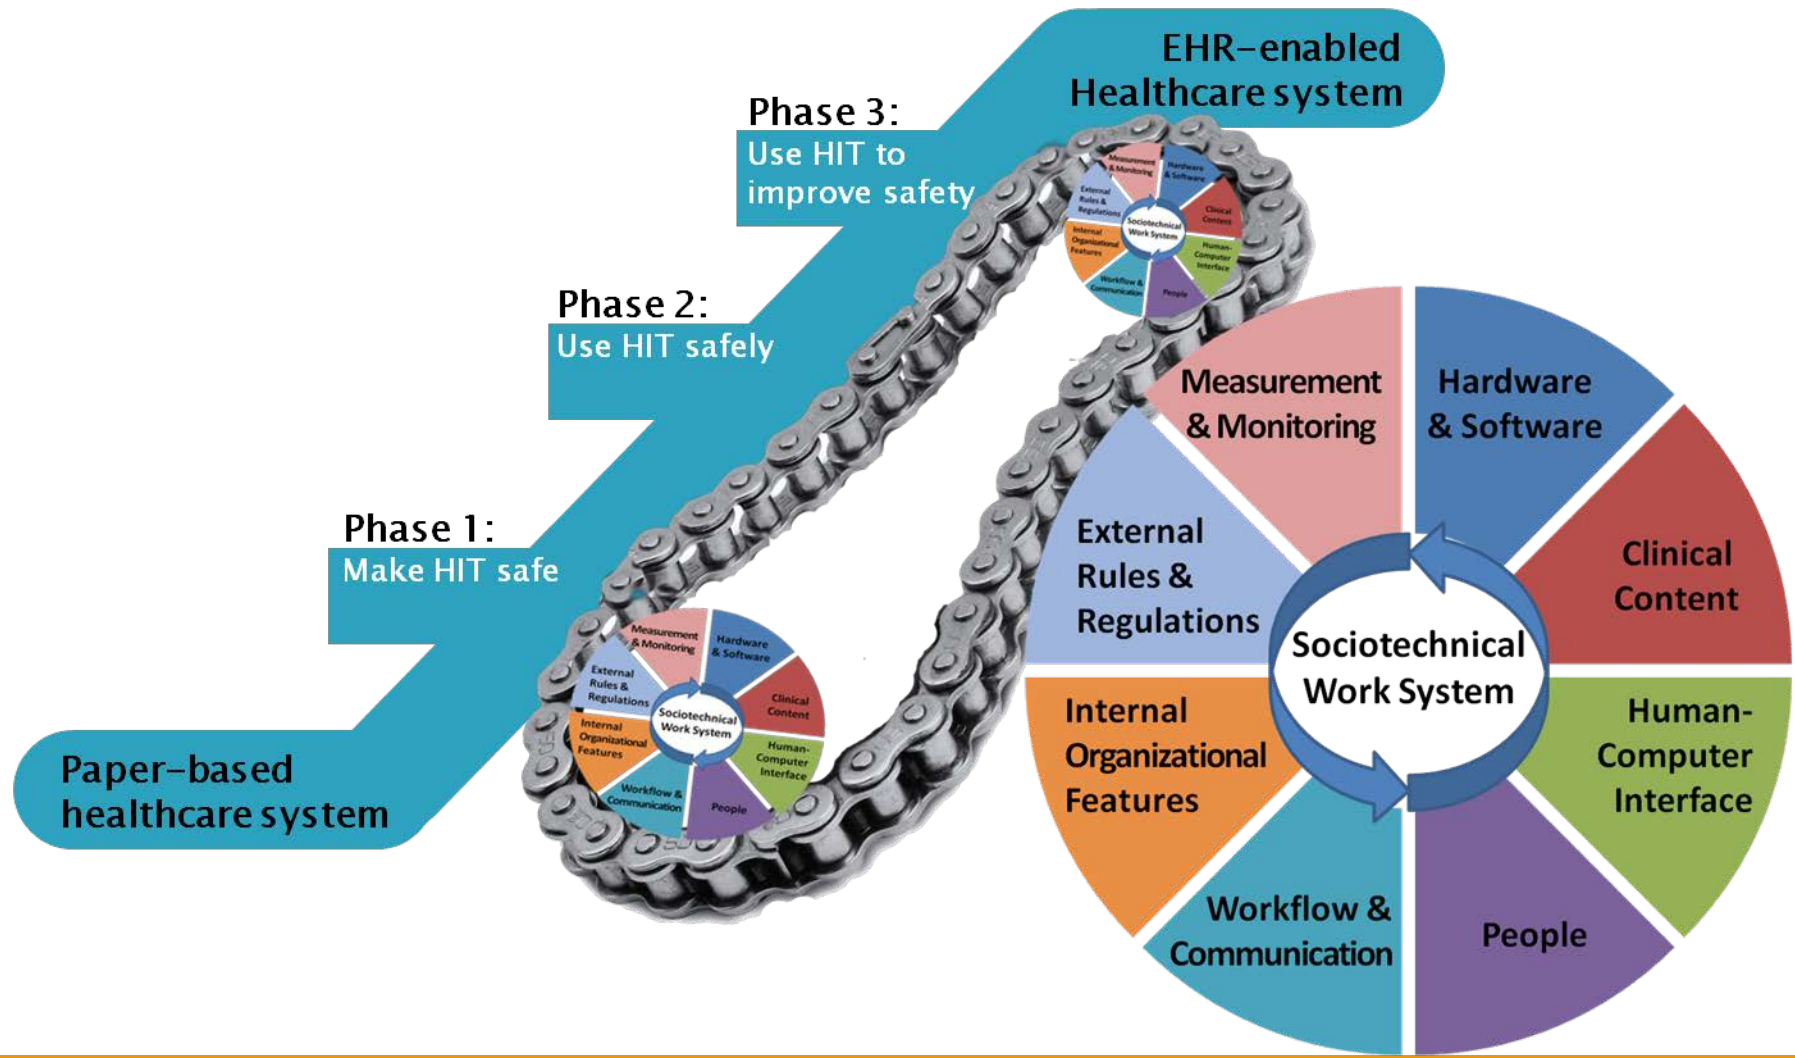

Using IT safely:

- unsafe or inappropriate use of technology
- unsafe changes in the workflows that emerge from technology use

Using IT to improve/monitor safety

- monitor health care processes and patient outcomes to identify potential safety concerns before harm

“SAFER” conceptual model

SAFER: Safety Assurance Factors for EHR Resilience

[> Team Worksheet](#)

[> About the Practice Worksheets](#)

[> Practice Worksheets](#)

Recommended Practices for Phase 1 – Safe Health IT

Implementation Status

		Fully in all areas	Partially in some areas	Not implemented		
1	Data and application configurations are backed up and hardware systems are redundant.	Worksheet 1	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	reset
2	EHR downtime and reactivation policies and procedures are complete, available, and reviewed regularly.	Worksheet 2	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	reset
3	Allergies, problem list entries, and diagnostic test results (including interpretations of those results, such as “normal” and “high”), are entered/stored using standard, coded data elements in the EHR.	Worksheet 3	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	reset
4	Evidence-based order sets and charting templates are available for common clinical conditions, procedures, and services.	Worksheet 4	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	reset

Thank You!
